

global relay search for Mobile and Outlook

MESSAGE ARCHIVE SEARCH

Designed for Compliance

Ensure regulatory compliance. Global Relay Search for BlackBerry, iPhone and Outlook are integrated components of Global Relay Archive. The system works to capture, serialize, index and preserve your firm's messages to meet the compliance requirements of highly regulated industries.

3 Convenient Ways to Search Archived Messages:

1) Mobile Access

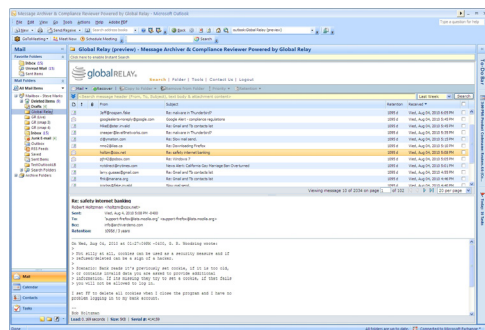

Global Relay Search for BlackBerry and iPhone lets users access every message they've ever sent or received — anytime, anywhere. These mobile apps are designed with the same fast and powerful search features found on Global Relay Archive, enabling users to find and restore any type of message in seconds.

Global Relay Search for BlackBerry and iPhone bypass the limited message retention on smartphones and are designed to minimize bandwidth usage and battery consumption.

2) Plug-In for Outlook

With Global Relay Search for Microsoft Outlook, users can access their historical messages via an easy-to-use interface, right within Microsoft Outlook. A single window in Outlook lets users enter search criteria, view results, open messages, copy messages to folders, and create folders on the fly — all in one familiar place.

3) Web Browser Access

Managers and compliance officers access their Global Relay archived messages via a secure, intuitive web interface. In addition, customers have the option of giving everyone in the organization access to the archive with a unique personal login (synchronized to the Active Directory). The Standard User access level provides employees with the ability to search their own messages from any web browser, but does not show compliance tools or audit trails.

Benefits

- Increase ROI on existing infrastructure
- Innovative interface — no training required
- A unified archive — search all archived message types
- Access messages anytime, anywhere
- Never lose a message or spend time searching for messages
- Eliminates the need for PST files
- Users restore lost emails themselves — saves IT admin time

Features

- Multiple access points available: iPhone, BlackBerry, Outlook plug-in, web browser, mobile web browser
- Search across an unlimited date range
- Reply, Reply All, Forward and Recover messages directly from within the archive
- Global Relay Search for BlackBerry is a Super App
- Global Relay is a BlackBerry Elite Alliance Member

Search your Message Archive Anywhere, Anytime

Give users quick access to any message, no matter where they are. Global Relay Search provides Message Archive access on BlackBerry, iPhone and Microsoft Outlook. These innovative applications give each user in the organization real-time access to a personal archive of all their current and historical messages — including every message type in the Archive. Powerful search functionality enables users to retrieve and restore any message in seconds.

Archiving Across the Organization

Equip employees with the power of message archiving. Hosted Message Archiving is a best practice for organizations of every size. A permanent copy of every incoming and outgoing message is captured and preserved in a secure archive that is specifically engineered for regulatory compliance, audit and eDiscovery, as well as business continuity and disaster recovery. Global Relay now brings the benefits of message archiving to every user's workflow, in or out of the office.

Retrieve any message via one convenient access point. With Global Relay Search, employees can rapidly search a single unified repository of all messages sent or received including email, Instant Messages, Thomson Reuters, Bloomberg, BlackBerry, Social Media and more.

Benefit from productivity gains. Since users can search their own message archive, lost messages and time-consuming searches are eliminated, saving time and boosting productivity. Sophisticated search capabilities including Boolean, wildcards, and proximity logic allow rapid message search and recovery. Users can instantly restore any type of message to the inbox, even if that message has been deleted — alleviating a burden for IT.

Business Continuity

Reduce the impact of server downtime. Since users can compose, reply and forward messages directly from the archive, access to messages is never lost during email server upgrades or outages. Employees can continue business as usual in the event of an internal email system failure.

About Global Relay

Founded in 1999, Global Relay is the expert in Compliance Messaging Solutions, including Compliance Archiving, eDiscovery, Mobile Messaging and Collaboration. Global Relay's 14,000 customers include small to large broker-dealers, hedge funds, investment advisors and public companies, as well as 22 of the world's top 25 banks.
